

IMPORTANT INFORMATION REGARDING YOUR TINTED WINDOWS

- **Do Not** roll windows down for 5 days or lock vent windows for 3 to 4 hours after installation. Sliding windows maybe opened right away, but please use the handle.
- After installation, you will notice **cloudy spots and/or wavy rippled appearance**. **This is normal during the curing process**. This will dry out in approximately **4 weeks**. It will dry out faster in hot/dry weather & more slowly in cold/damp weather.
- **Do Not** wash the inside of windows for 30 days, or until dry. This will allow proper curing of the adhesive and edge sealing. A good cleaning solution to use would be an oz. of alcohol to a quart of water with a couple of drops of mild dishwashing liquid such as Dawn or Ivory.
- On occasion there will be grains of dust or lint that cannot be eliminated from the film and in some cases this too may be normal. The film may also highlight some small imperfections in the glass that were not noticed before. Observe the installation from four to six feet away. This is the way we normally look through a window and this is the way you should observe your Solar-Gard Window Film - looking through it, not at it.
- If you have any other questions, please stop by or give us a call. Thank-you for your business.
